

PRODUCT DATA SHEET

PREGROWN SEDUM MAT SeduMixmat ITG1

DESCRIPTION

The pre-cultivated Sedum Mats are ready-to-roll out as an instant vegetation layer designed for extensive green roofs. Grown for a minimum of 9-12 months, they are hardened at the high fields of the Central Balkan Mountain. The vegetation blankets are biodegradable, produced on a coir mat, Innova Top Green® substrate and a plant mix of 6 -10 varieties of succulents.

Our standard pre-vegetated Sedum Mats (sometimes referred to in the industry as "blankets" or "carpet") provide instantly green installation. They can be easily cut and shaped to fit any form. Our Sedum mats work with most green roof systems on the market. However, our Sedum mats are not only useful on the roof, they are a lower maintenance and water wise alternative to grass in many applications on the ground as well.

SeduMixmat ITG1 are produced in accordance with FLL guidelines.

TECHNICAL DATA

Base Layer: 100% Coconut (Coir) Geotextile, Weight ca. 365 g / m², double-quilted with PP-Netting

Substrate layer: Innova Top Green® Growing media mixture, containing organic component (soil / compost) and mineral recycled secondary aggregates
